

Positive Temperature Coefficient (PTC) Data Sheet

Description

The 500V series provides radial resettable overcurrent protection with holding current from 0.11A to 0.16A. This series is suitable for applications with higher working voltage up to 500V.

Features

- Radial leaded devices.
- High voltage surge capabilities
- Flame retardant epoxy polymer insulating material meets UL94 V-0 requirement.
- Over-current protection
- Available in lead-free version.
- Operating Temperature: -40°C~+85°C
- Meets MSL level 1, per J-STD-020

Applications

- Powered supplies
- Security systems
- Network equipment

- IT equipment
- XDSL equipment
- Motor protection

Electrical Characteristics

D (N)	Marking	hold	Itrip	Vmax	lmax	Pd typ.	Maximum time to trip		Resistace	
Part Number		(A)	(A)	(VAC)	(A)	(W)	Current(A)	Times (S)	$R_{min}(\Omega)$	$R_{max}(\Omega)$
FTR600-110	JK600 110U	0.11	0.22	500	3.0	1.0	1.0	5.0	6.0	18.0
FTR600-150	JK600 150U	0.15	0.30	500	3.0	1.0	1.0	6.0	5.0	15.0
FTR600-160	JK600 160U	0.16	0.32	500	3.0	1.0	1.0	7.5	4.0	12.0

[·]lhold= Hold current: maximum current device will pass without tripping in $25\,^\circ\!\!\!\!\mathrm{C}$ still air.

Test Procedures and Requirement

Items	Test Conditions	Accept/Reject Criteria		
Resistance	In still air @25℃	R min ≤ R ≤ R max		
Time to Trip	Specified current, V max , 25℃	T ≤ max. Time to trip (T trip)		
Hold Current	30 min, at Ihold	No trip		
Trip Cycle Life	V max , I max , 100 cycle	No arcing or burning		
Trip Endurance	V max , 24hours	No arcing or burning		

Itrip= Trip current: minimum current at which the device will trip in 25℃ still air.

·Vmax= Maximum voltage device can withstand without damage at rated current (Imax)

Imax= Maximum fault current device can withstand without damage at rated voltage

[·]Pd typ.= Typical power dissipated from device when in the tripped state at 23 °C still air.

Rmin= Minimum resistance of device in initial (un-soldered) state.

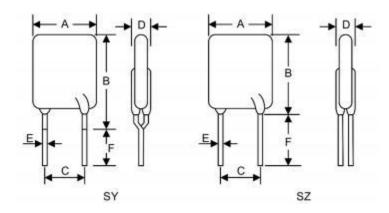

Rmax= Maximum resistance of device in initial (un-soldered) state.

Marking Code

Recommended Soldering Conditions

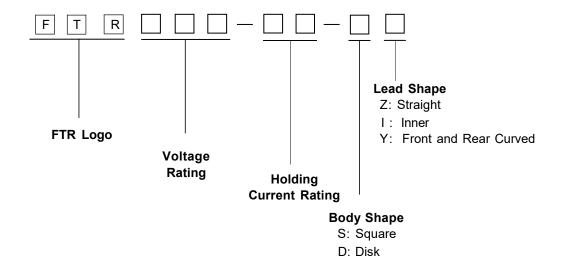

Items	Conditions			
Dro Hooting Zono	Refer to the condition recommended by the flux manufacturer.			
Pre-Heating Zone	Max. ramping rate should not exceed 4°C/Sec.			
	Max. solder temperature should not exceed 260°C			
Soldering Zone	Time within 5°C of actual Max. solder temperature within 3 - 5 seconds			
	Total time from 25°C room to Max. solder temperature within 5 minutes including Pre-Heating time			
0 1: 7	Cooling by natural convection in air.			
Cooling Zone	Max. ramping down rate should not exceed 6°C/Sec.			

Manual Soldering Recommendation Parameters

Items	Conditions
Soldering condition	The highest power of the manual soldering iron should be 30W or less, soldering temperature should not be higher than 280°C.
Soldering time	The soldering time should be kept within 3 seconds, otherwise it might cause insulation layer cracking, and increased part resistance.
Soldering position	The distance on the leads between the soldering point and bottom of the PPTC body should be equal or greater than 4mm.
Other	The soldering iron should not contact the PPTC body except the leads. If the soldering conditions are kept to lower temperature, less time and larger distance, the outcome of the soldering will be better.

Partnumber code

Environmental Specifications

Operating / Storage temperature	-40°C to +85°C			
Maximum Device Surface Temperature in Tripped State	125 ℃			
Passive Aging	+85℃, 1000 hours ±5% typical resistance change			
Humidity Aging	+85℃, 85%RH, 1000 hours ±5% typical resistance change			
Thermal Shock	+85°C to -40°C 10 times 30% typical resistance change			
Solvent Resistance	MIL-STD-202, Method 215 No change			
Moisture Level Sensitivity	Level 1, J-STD-020			

Mechanical Specifications

Tensile strength	1.0Kgf, 10 seconds,No visible damage
Bending strength	0.5Kgf, 90°, 3 times,No visible damage
Vibration	Freq: 10-55Hz, Amp: 0.75mm, 1min; No visible damage
